## History

Our company was founded in Norway in 1992 by Cato Bryn, specializing in distribution of oil filled radiators and other types of heaters. From 1992 to 2009 we gained significant knowledge and expertise of different type of heaters, thus enabling us to sell to almost all the largest retailers in the Nordic countries.

In 2010 Cato's son Philip joined the company. Philip looked at the heating industry with completely new eyes and wondered why so little had happened with the appearance of heaters the last 20 years. Why did people still accept to have traditional, old-fashioned heaters in their home when interior design in general had changed dramatically over the years. Everybody wants their home to look as attractive as possible, and the old heaters simply did not fit in any more.

Since heaters are part of so many homes, Philip and Cato decided to use their extensive know-how to invent a completely new design of heaters. They wanted to make beautiful, modern and minimalistic heaters with a Norwegian design, naturally using the most advanced technology, so that the new generation of heaters complement people's homes. They named their new brand Mill and their first Mill heater was launched in 2012.

Mill Glass was the first Mill heater, and then Mill Steel was launched in 2013, Mill Convection in 2014 and Mill Oil in 2015 – all series became an immediate success and after a few years Mill became the market leader for heaters in the Nordics.

Mill offer revolutionary, innovative designs. We are continuously innovating to complement our current range of products.

Since the Mill design has been so successful in the Nordics, we decided to show Mill at both the IFA fair in Berlin in September 2015 and the International Home + Houseware show in Chicago in March 2016. The feedback from retailers and distributors all over the world has been fantastic, and for the Winter season 2016-2017 Mill will be sold in 20+ countries all over Europe, in Asia and North America at several of the largest retailers globally.

**We are honoured to announce that mill convection SG1200WiFi has received the prestigious International Red Dot Design Award 2019!**

The Red dot is the award for high design quality. The international jury only awards this sought-after seal of quality to products that feature outstanding design.

Head designer and co-owner at Mill International, Philip Bryn-Haugland, is the man behind the unique and innovative design that has resulted in this honourable recognition.

'For more than 60 years, the red dot award – one of the world's largest design competitions – has been providing a platform for designers and companies to access good design. The experience and expertise of our jury in the evaluation process is unparalleled. True to the motto in search of good design and innovation, they have tested individually each of the more than 5,500 products entered and have reached a joint decision on which products will receive a distinction' - Red dot team.
